ELM Solution for Legal Operations
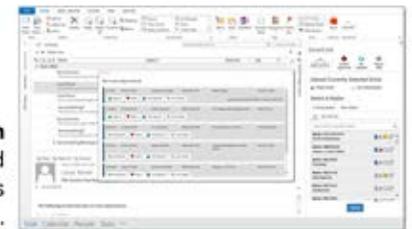

ASCENT®
ENTERPRISE LEGAL MANAGEMENT

ASCENT® is the choice for high-performing corporate legal departments seeking to streamline complex legal operations, manage legal spend, and analyze all matter data. Gain full visibility into all aspects of your legal operations with a fully-integrated, configurable dashboard delivering this information when and where you need it. Legal teams won't need to change the way they work because ASCENT® adapts to your existing processes. Advanced user dashboards allows teams to easily customize what they see and how they see it to make better decisions.

doeLEGAL's ELM technology includes: Analytic Dashboards, Outlook Integration, Query & Report Builders, AFA Creation, and Legal Holds

SmartView™ Analytic Dashboards
Allow teams to see a complete view of the entire business on one, configurable screen. Generate deeper business insights using graphical visualizations to make instant, data-based decisions.

SmartLink™ Outlook Integration
Allows your teams to operate in a more efficient, unified work environment. You stay in Outlook to handle tasks without switching back and forth between systems.

Easily configure ASCENT® to simplify legal operations and deliver business insights

A software experience that makes sense
Solve the problem of having to change the way you work because your software can't change or keep up. ASCENT's completely redesigned user interface lets you navigate more simply, customize what you see and how you see it, enabling you to work smarter, not harder. All capabilities of the solution are available in a hosted position and through the SmartLink™ Outlook Integration module.

Complete view of your business in one place
Viewing your most critical information in one place, in a way that makes sense to you, is critical. Do you spend hours poring over lengthy reports simply to find the answer you need? The SmartView™ dashboard provides graphical views of key information at a glance. You can compare matter, spend, and law firm data in one view to make informed decisions.

Ask complicated questions more easily
You have questions about everything the system captures and you want up-to-the-minute results. The new Query Builder simplifies how you ask these questions and lets you target every piece of information in the system. Continually adding valuable features like dynamic filters and user-created calculated fields lets you customize the results.

Get answers instantly
You need answers without waiting for someone else to pull a report. The new Report Builder™ lets you easily create reports by using drag and drop fields. Reports can be scheduled and automatically distributed or made instantly available to everyone using the new SmartView™ dashboard. You can also output to Excel with one click. Combining this with the new Search Page enhancements makes your information even more useful.

Create fee arrangements to predict and control costs
Fee arrangements should not be limited by your software - only by your creativity. You deserve the flexibility to use what makes the most sense for your business. The AFA Wizard™ capability allows you to create and manage new "value-based billing" scenarios, transparently collaborating with outside counsel - putting you in control of vendor billing and fees.
